

Competitive Strategy Report

Executive Summary

Tribecar and GetGo compete directly for Singapore customers seeking short-term access to a vehicle without ownership. Both offer app-based booking and access, but their propositions differ: Tribecar combines cars with motorcycles, vans and commercial vehicles, multiple rental durations, and additional models including subscriptions, leasing, owner vehicle-sharing and PHV rentals. It also advertises availability in Singapore, Johor Bahru and Penang. GetGo focuses on carsharing in Singapore and reports a larger local network—more than 3,000 vehicles across over 1,700 locations—along with petrol, diesel, hybrid and electric cars. These network figures are company-reported and should not be treated as directly comparable measures of availability. GetGo's scale and advertised no-deposit, no-membership-fee standard access are competitive threats. Tribecar's clearest opportunities are to make its wider vehicle and access-model range easier to understand, sharpen its PHV proposition, and reduce booking uncertainty by clearly communicating total costs and availability. Recommendations should be tested against Tribecar's own booking and customer data rather than assuming unmet demand.

Competitor Classification

GetGo Carsharing — Direct Competitor

Product & Feature Comparison

Feature / Capability	Primary Company	GetGo Carsharing
Core audience and need	Serves people seeking occasional or flexible vehicle access, eligible PHV drivers, and vehicle owners or operators who list vehicles through the platform.	Serves Singapore customers seeking occasional car access without ownership, including short-term and full-day users.
Vehicle categories	Lists sedans, MPVs, SUVs, motorcycles, vans and commercial vehicles.	Offers sedans, SUVs, MPVs, vans and electric vehicles, as well as petrol, diesel and hybrid vehicles.
Geographic availability and network	Advertises more than 1,500 vehicles and availability in Singapore, Johor Bahru and Penang.	Reports more than 3,000 vehicles across over 1,700 locations in Singapore; these are company-published figures.
Booking and vehicle access	Customers book online by time and location and use a smartphone or web app to unlock the vehicle.	Customers find, book and access vehicles through a mobile app at designated lots; vehicles must be returned to the original lot.
Rental durations and access models	Offers hourly, daily and weekly rentals, plus a recurring subscription, monthly leasing, PHV rental and an owner vehicle-sharing service.	Offers hourly and full-day bookings through its carsharing service.
Specialized work-use offering	Offers PHV-eligible vehicles and rates, short-term rental and rewards based on monthly eligible booking hours.	The provided data describes general carsharing for leisure and other short-term needs; it does not specify a dedicated PHV rental offer.
Pricing and stated inclusions	Uses time- and vehicle-category-based rental rates, with some bookings potentially subject to mileage charges; also offers	Uses time charges, mileage charges and a per-booking platform fee. Advertises no deposit or membership fee for standard access; fuel, charging

	subscription and monthly lease pricing. Rates and terms vary.	and insurance are described as covered subject to terms and insurance excess.

SWOT Analysis

Strengths

- Broader vehicle selection than the competitor profile provided, including motorcycles and commercial vehicles as well as cars.
- Multiple access models span occasional rental, subscriptions, monthly leasing, PHV use and vehicle-owner listings.
- Advertises availability in Singapore, Johor Bahru and Penang.
- Self-service booking and app-based vehicle access reduce the need for in-person key collection.

Weaknesses

- Tribecar advertises more than 1,500 vehicles, while GetGo reports more than 3,000; the figures are company-reported and are not necessarily measured on the same basis.
- Its pricing can include time-based rates and, for some bookings, mileage charges; customers are advised to confirm the total estimate and applicable terms.
- The breadth of products and terms may make it harder for customers to identify the best-fit Tribecar option without clear comparison and guidance.

Opportunities

- Use the range of vehicle types to attract customers whose needs are not limited to standard carsharing, including van, commercial-vehicle and motorcycle users.
- Differentiate through dedicated PHV rental rates and rewards, a use case not specified in the provided GetGo profile.
- Explain the distinct roles of hourly rental, subscription, leasing and

Threats

- GetGo's company-reported vehicle and location network may strengthen its appeal to customers who prioritize nearby availability.
- GetGo advertises no deposit or membership fee for standard access, which may make its entry proposition simpler to communicate.
- GetGo's app-based access and range of vehicle sizes and powertrains overlap with

TribeShare to reach customers at different stages of vehicle need.

- Promote the advertised Johor Bahru and Penang availability as a geographic distinction, while clearly showing applicable vehicle and trip conditions.

Tribecar's core short-term mobility offer.

Strategic Recommendations

Make Tribecar's vehicle and access-model breadth a clearer choice advantage

30 | Positioning Adjustment

Expected Impact: Help customers quickly identify when Tribecar is a better fit than a car-only short-term booking, and make its differentiated offerings easier to evaluate.

Execution Steps:

- Organize customer-facing discovery around need states such as errands, group travel, work use, PHV driving and longer-term access.
- Clearly distinguish available vehicle categories and the terms of hourly/daily/weekly rental, subscription, leasing and TribeShare.
- Track engagement and booking conversion by need state and product entry point.

Test a more focused PHV acquisition and retention proposition

60 | Experiment

Expected Impact: Determine whether Tribecar's PHV rates and booking-hour rewards can improve engagement among eligible drivers.

Execution Steps:

- Create a focused campaign explaining PHV-eligible vehicles, rates and the existing rewards program.
- Run a limited test against a comparable audience or period using existing booking channels.
- Measure eligible-driver bookings, repeat usage and reward-program participation before deciding whether to expand.

Reduce uncertainty about total booking cost

60 | Experiment

Expected Impact: Make Tribecar's variable pricing easier to assess and help customers compare options before committing to a booking.

Execution Steps:

- Review booking-stage presentation of time charges, possible mileage charges, promotions, surcharges and applicable conditions.
- Test a prominent estimated-total-cost summary before booking confirmation, using the rates and terms applicable to that booking.
- Compare booking completion and customer questions or complaints related to price across the test and comparison groups.

Use booking data to test targeted availability improvements

90 |
Experiment

Expected Impact: *Identify whether targeted fleet or listing changes can address customer demand that is constrained by vehicle type, location or booking period.*

Execution Steps:

- Analyze Tribecar booking searches, unsuccessful searches and completed bookings by location, vehicle category and time period.
- Select a limited test based on the strongest observed demand gap and available operational data.
- Measure availability, booking conversion and repeat bookings in the test against a suitable comparison.
